Ribbon Communications - Human Resources

Software Development Environment and DevOps Developer

Various

Dear Hiring Manager,

I was immediately drawn to Ribbon Communications' commitment to innovation and transforming communication networks, particularly your focus on leveraging cutting-edge technologies to drive down costs and increase efficiency. The opportunity to contribute to the DevOps/Software Development Environment team as a Software Development Environment and DevOps Developer, where I can apply my passion for automation and cloud technologies, is incredibly exciting.

My experience at Transport Canada, where I automated Azure DevOps tasks and developed over 50 ETL pipelines within the Microsoft Azure ecosystem, directly aligns with the requirements of this role. I streamlined ticketing workflows, saving the DevOps team an estimated 20 hours per week, and designed scalable data ingestion processes from diverse sources. Furthermore, my project experience, such as building a fully automated job application pipeline using Python, Selenium, and Jenkins, demonstrates my ability to create efficient and reliable systems, mirroring the continuous integration and improvement goals of your team.

I am eager to bring my skills in cloud technologies, automation, and software development to Ribbon Communications, contributing to the development of your next-generation management system. My passion for creating innovative solutions, combined with my experience in building and maintaining robust systems, makes me confident that I can make a significant impact on your team. I am excited about the prospect of discussing how my skills and enthusiasm can contribute to Ribbon's continued success.

Sincerely,  
Simon Amable.
